

1978 Sporting Arms of Quality

New Model 37, 3" Magnum.

## Hunters

No one is a bigger friend of a grouse or a deer or has more respect for the rights of all game birds and animals than the person who wears a hunting license. He willingly pays for his opportunity to share the wilderness with them. And the money he pays should and does buy the sheltering, feeding land and waters the birds and animals require.

This outright contribution for the right to hunt says about them that they care for a place to be alone in the fields, marshes, woods, or wherever the cover is. They care about its being preserved and conserved against inroads of people who could care less.

Hunters respect seasons. They respect the firearms they carry. They respect the rights of others to separate interest. They are a quality of people in a quality enriched sport where quality of environment, quality of wildlife and quality of equipment has always been important.

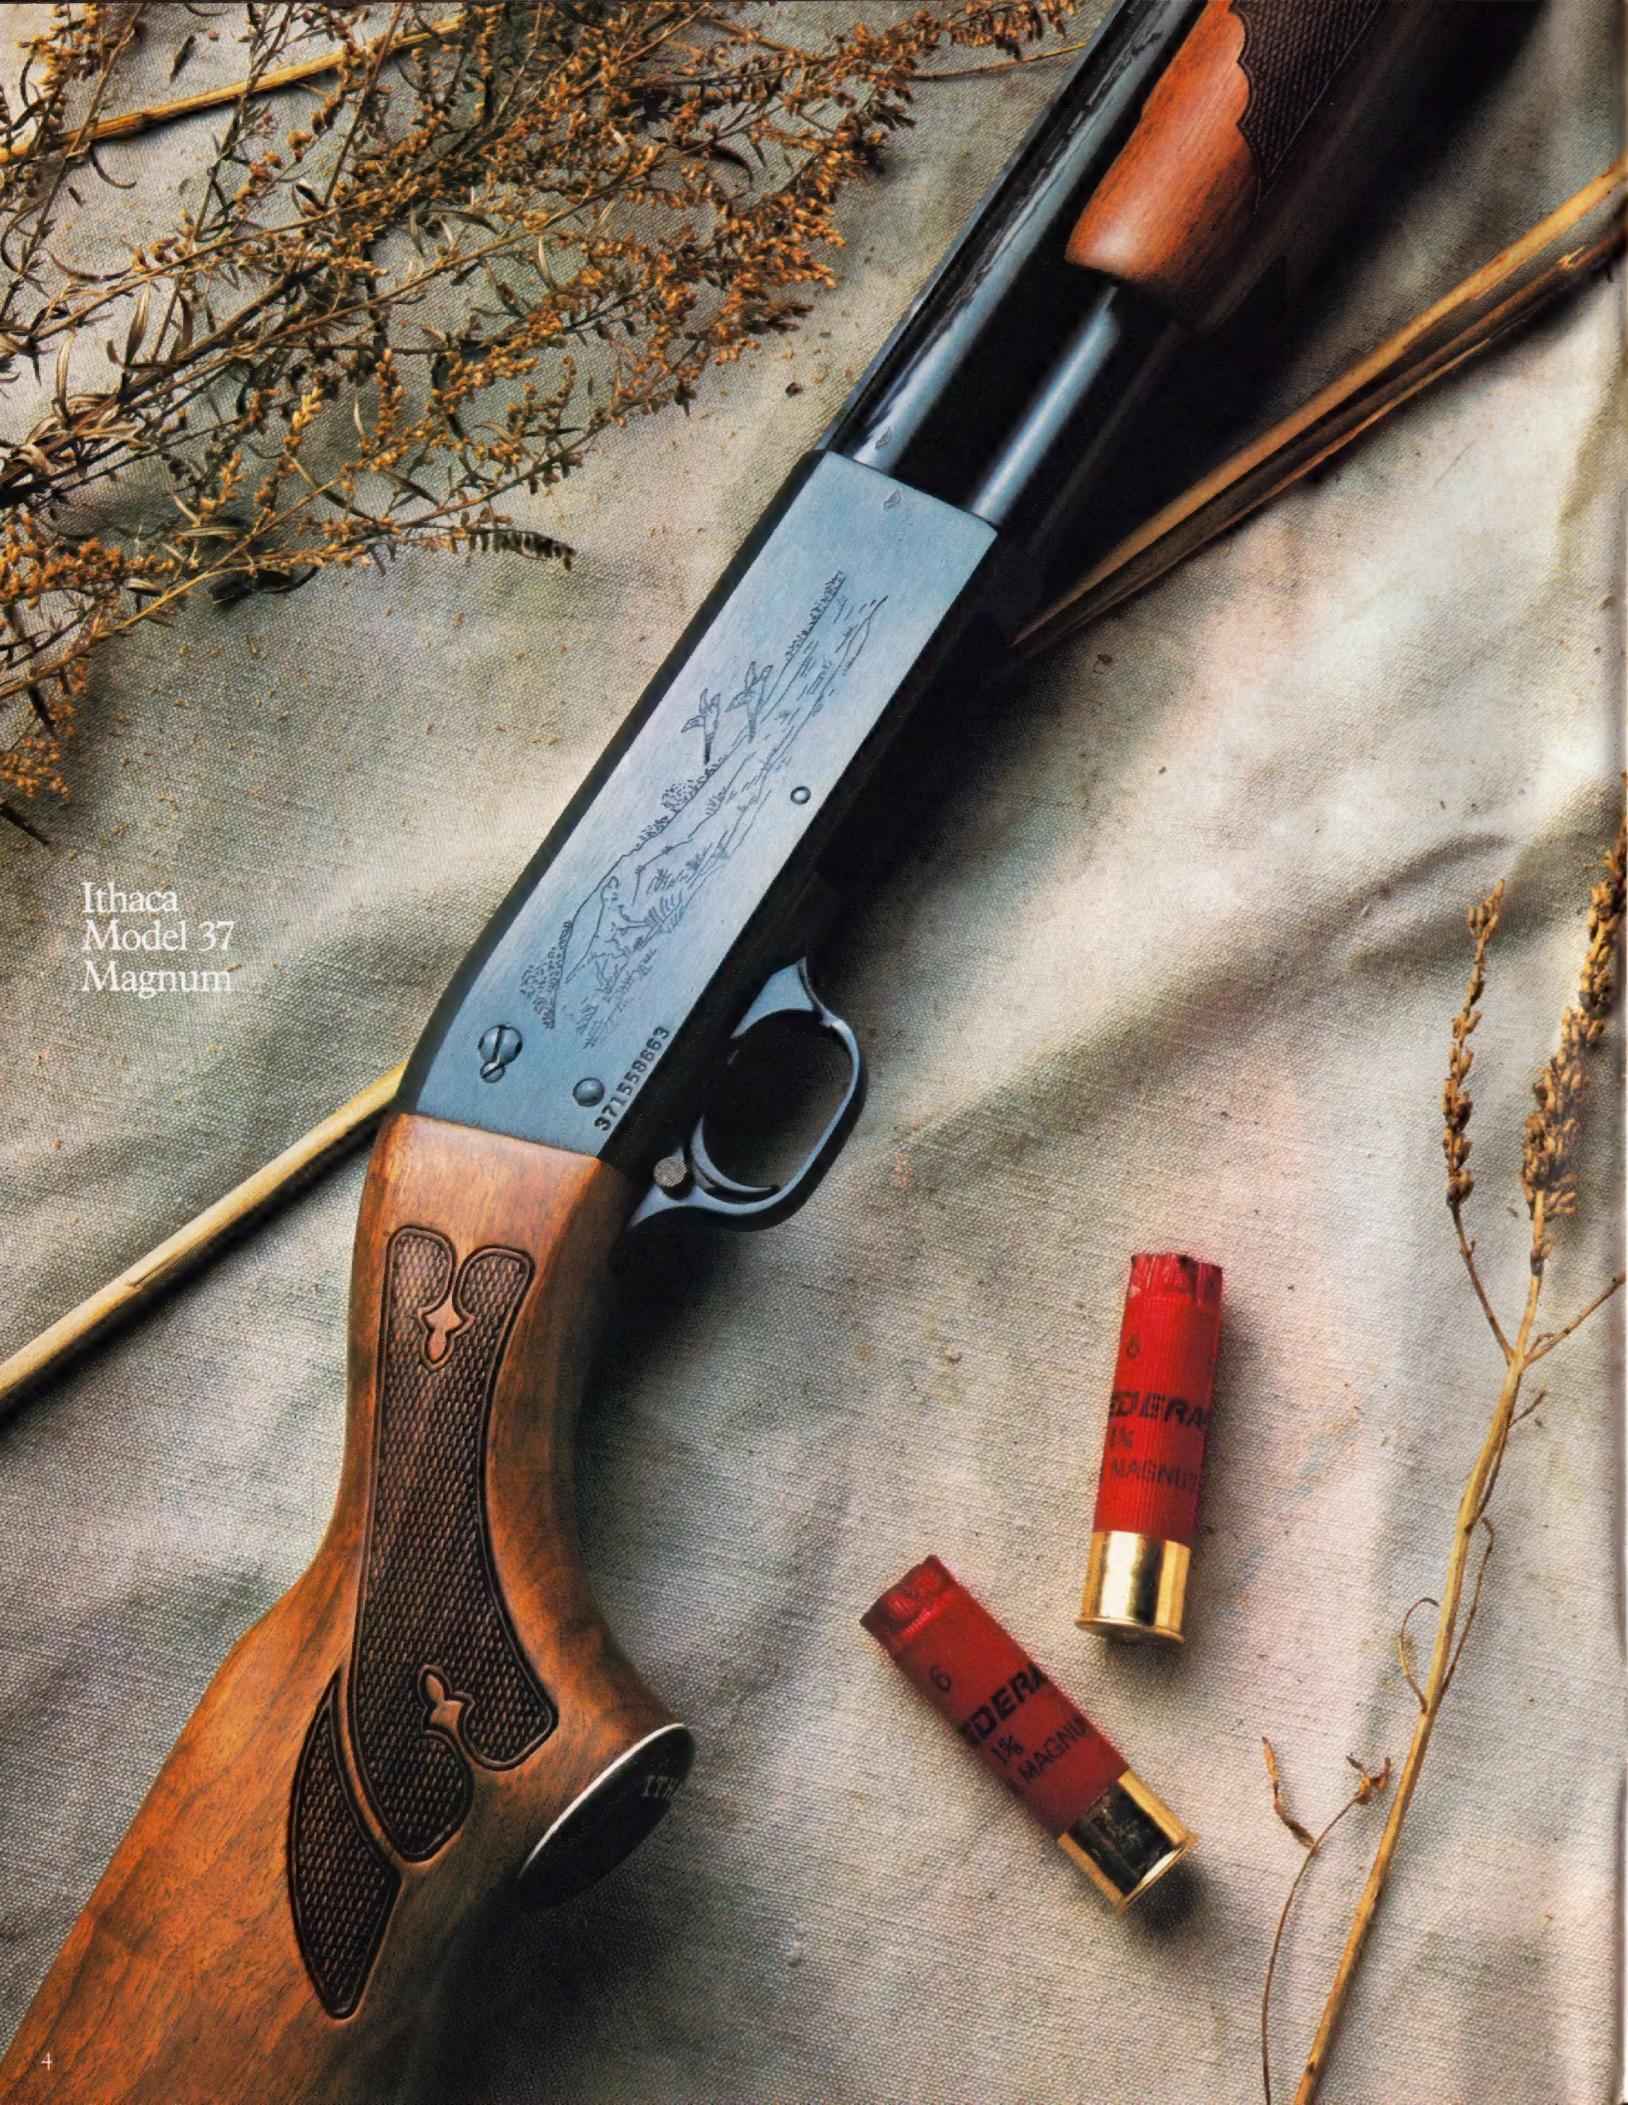

From the unlicensed days of mountain men shooting high quality Hawken's, to today's hunters shooting high quality Ithaca's... it has always been the quality that's important.

A good mountain man knew when he handled a rifle exactly what its quality was. And only one Hawken was best. Today's experienced hunter knows the same thing. When he handles an Ithaca Model 37 Featherlight® shotgun and senses its fit and feel, and when he slides its action, he knows he's handling quality fitted to the sport.

Handle the Ithaca guns you read about on these pages. You'll find one you can respect is included here. Then join the millions of other quality people who, when they want quality, they say "Ithaca".

Ithaca  
Model 37  
Magnum

## New Model 37, Magnum 12 Gauge -3"

12 gauge, five shot 3" magnum. Longer range. More shot. More power. We've given this new gun all the quality that's made our Model 37 famous. It's all steel and walnut, and magnum. Receivers are made exactly the same as Model 37 receivers have always been made, machined from solid blocks of steel, with the strength to withstand magnum loads.

We scrap a lot of metal to end up with the quality we put into this Model 37 Magnum repeater. We spend the time to square up the block of steel that'll become this gun's receiver, so that every machining step from the beginning will be absolutely accurate. That block of steel we start with weighs more than the whole gun will when it's ready to shoot.

We make about six pounds of scrap to end up with each 1 1/2-pound ordnance-grade steel Model 37 receiver.

A lot of the work is done on turret lathes, but we still add on a lot of handwork. That's where Ithaca quality gets its finishing touch, from the Ithaca people who drill, file or make the final fit. Fit so fine, for example, this gun's action drops open with only a little over a half-pound pull.

There are other quality steps we take, some big, and some small, but all important when our gun becomes your gun. Like trigger plates. Ours are still steel forgings. Barrels are triple-reamed on self-centering reamers for straightness. Chokes are reamed, not swedged. Barrels are also lead lapped in four stages for a perfectly smooth and polished cylinder.

Barrel thread is a "roll" thread. That means it's stronger because the metal tends to work harden as the thread is "rolled" into it.

We attach barrel lugs and sight ramps to the barrel using high-temperature silver solder. It makes the strongest joint.

We machine the Model 37 bolt from scratch from a solid steel block.

Vent ribs float. They are fitted over posts that have been machined dead flat. The rib is welded to the rearmost post only. It floats on the other posts and retains its sighting plane accuracy whether barrel shoots hot or cool.

Roto-Forge® barrels hammered to length and gauge and magnum strength. Reamed on a centerless reamer for straightness. Lead lapped for polished smoothness of bore. You won't find truer barrels anywhere. Each is tipped with Ithaca's exclusive Raybar® sight, a fluorescent spot of red that lights your way to targets.

The sleek profile of this new Model 37 3" Magnum carries the characteristics that instantly identify any Featherlight shotgun to experienced shooters. No side-ejection ports. Instead a clean, uncluttered look to the receiver. Bottom ejection makes this possible. Spent hulls eject straight down, never crossing your line of sight, never distracting you from your target. What's more, rain, snow, debris can't fall into a bottom ejection port. Your gun's action is better protected from dirt.

This new Model 37 Magnum is available in 12-gauge only, 3" chamber. Choice of 30" barrel FULL choke or 28" MOD. Both include vent rib. Those are the only barrel sizes and chokes available.

See page 7 for additional quality features. All Model 37 features apply to this magnum model as well. Weight is 7 1/2 lbs.

Suggested retail price \$277.95.\*\*

Ithaca Model 37  
Featherlight®  
Pump

## The original and only Featherlight® shotgun

With this Featherlight, you'll cover more ground, shoot quicker, finish the day fresher and with more game than you might with other pump guns.

You shoot quicker with your Featherlight because we keep tight control over the weight and fit of all action parts. To pump a shell into the chamber requires only a slight movement of your arm, and the Model 37 action glides effortlessly through ejection and chambering follow-up shots. The gun's recoil helps you with this action so it doesn't take long before you're shooting as quick with a Model 37 as some shooters do with semi-automatics.

No other pump gun made looks like a Model 37. Its smooth solid-looking receiver is a dead giveaway of this gun's exclusive bottom ejection. Spent hulls shuck straight down where they can't do any harm. And with the ejection port on the bottom of the gun instead of on the side, as with other pumps, rain, dirt and debris can't fall into a Featherlight action. Shoot right or left handed. With a Model 37 shells don't eject across your line of sight.

Have you noticed there's been less talk about the sweet good looks of American Walnut wood on guns lately? That's because this lush wood is gradually becoming more and more scarce. Your Model 37 has this rich-looking wood, solid American walnut stock and forend.

This Model 37 is the original Featherlight pump you may have heard talk about. It has Roto-Forged barrels (see page 24) hammered from 15-inch rounds of steel similar to the way good rifle barrels are made. We triple-ream Model 37 barrels, lap and polish their bore to mirror-smoothness. Deep bluing gives your gun the best known of traditional finishes. To top it off, we tip each Model 37 barrel with our exclusive Raybar Sight, the sight that lights your way to your target.

We carry the Ithaca tradition for quality in this shotgun through even to the trigger guard. It is still made of steel, and that's something unique in a field grade pump these days.

Model 37 Featherlight shotguns are 5-shot with a migratory game plug. Left hand safety is available. Barrels are interchangeable. See pages 12 & 13 for Model 37 specifications.

### EXTRA BARRELS

Many shooters change barrels according to the game or the season. You can order extra Ithaca barrels from Ithaca Dealers. Or order direct. Send us your name, address, model and serial number of your Ithaca gun, plus your choice of barrel, gauge, length, choke. Include check or money order for exact amount. New York State residents add 7% sales tax. Send order to us at 123 Lake St., Ithaca Gun Co., Ithaca, N.Y. 14850.

Ithaca  
Model 37 & 51  
Deerslayers

## Ithaca Model 37 Deerslayer® repeater. The first shotgun built for slugs.

Ithaca now has three Deerslayer® models to handle rifled slugs with what has become the famous Deerslayer accuracy. Shooters have no trouble grouping five shots in a 3" circle at 40 yards, or into a 6" circle at 75 yards, with these guns as long as their loads are consistent. Against Whitetail, it's this kind of accuracy that's led to the *fame* of the Deerslayer *name*. You bring home prizes with this gun that you'll be lucky to get with open choke or improved cylinder barrels. These barrels, incidentally, provide you with more than effective 35-yard patterns on upland game when firing regular shot shells.

### THE MODEL 37 FEATHERLIGHT® DEERSLAYER

This is the same slick-action pump described on pages 6 and 7, except in barrel length and bore plus other highly accurate slug-shooting features.

Its Roto Forged barrel is bored full length to RS (rifled slug) caliber.

There is no choke. Since slugs fit the barrel precisely, your shot sends the slug smoothly down the barrel, straight and true to the point of impact. Shooters who use RS rounds in regular birdgun barrels get less accuracy because slugs are usually undersize to the barrel. They rattle their way to the muzzle, hit the choke, and then go winging off on a hopeless flight.

Our exclusive blade style Raybar® front sight is standard. Rear rifle sight adjusts to elevation and is grooved to receive scope.

This allows you to remove the barrel and scope as a unit, and retain settings for accuracy, if you interchange barrels from one season to another. Barrel lug is tapped for sling swivels, which are included.

Standard Deerslayer models feature same grade of walnut as standard Model 37 or Model 51. Super Deluxe Deerslayer models feature more select walnut grain labeled "semi-fancy". Recoil pad is standard on all models. For interchangeable barrels, see pages 6 & 7. For specifications, see pages 12 & 13.

### THE MODEL 51 DEERSLAYER®

This is the same soft-recoil, gas-operated, semi-automatic Model 51 as described on pages 10 & 11. Receiver, action, and wood, plus the Lifetime Operational Warranty (Limited), are exactly as indicated on those pages for the Model 51. In its Deerslayer configuration only the barrel is different. The Model 51 rifled slug barrel is available only in 12 gauge, 24-inch length. Recoil pad, Raybar front sight and adjustable rear sight, are standard. Accepts scope as above. For interchangeable barrels, see pages 10 & 11. For complete specifications, see pages 12 & 13.

### NEW EIGHT-SHOT DEERSLAYER MODEL

Standard grade. 12-gauge, 20" barrel only. Sight base is grooved for Long Eye Rifle Scope. Magazine capacity 7, and one in chamber. Sling swivels are furnished.

Suggested retail price \$249.95. Extra Barrel for 8-shot models: Available in 12-gauge, 28" MOD Vent only. May be special ordered from factory. See address page 7.

Model 37 Deerslayer. Suggested Retail Price \$244.95  
Model 37 Super Deluxe Deerslayer. Suggested Retail Price \$269.95

Model 51 Standard Deerslayer. Suggested Retail Price \$299.95

## Ithaca Model 51 Gas Auto

## Ithaca Model 51 gas operated semi-automatic, "reliable because its design is so simple"

The recoil feels softer. That's what the gas-operated, semi-automatic is all about. Shooters seem to hit better with one because there's less muzzle jump and the sight doesn't jump away from the target. Second and third shots can come off faster, with a better chance for scoring. And you end up the day with a shoulder that feels quite a bit more comfortable than it might if you were shooting another gun.

This Model 51 is challenging the best of its competition. Its design solves the major source of difficulty in old-style gas automatics. The design is new, simple and reliable. Nothing has been picked up from the past. Gas operation is a modern concept. It requires and gets a modern application in the Model 51.

The best things from Ithaca's past that we've put into this shotgun are Ithaca quality and craftsmanship. Our machined,

solid steel receiver, for example. Our triple-lug lockup that seemingly makes the bolt and barrel one safe integral piece. And our use of solid American walnut in both stock and forend prove our pride in this shotgun.

This is the only gas auto with a one-moving-part gas system, the exclusive Everlast® gas system we describe on page 25. In fact, the entire gun has 30% fewer parts than guns that would compete with it. So simple is the Model 51 assembly, it can be field stripped in seconds, without the use of tools.

Our Model 51 has a Roto-Forged barrel (see pages 24 & 25) to keep it shooting true. Exclusive Raybar sight is standard. Lifetime Operational Warranty (Limited), comes with every gun. Turn to pages 12 & 13 for complete Model 51 specifications.

### MODEL 51 DEERSLAYER

See pages 8 & 9 for description, and pages 12 & 13 for specifications.

### Lifetime Operational Warranty Limited

This Ithaca Model 51 shotgun is warranted to operate satisfactorily for as long as you own it. This warranty covers any and all defects in parts, materials or workmanship which affects the satisfactory operation of this gun. In addition, but for one year from date of purchase only, this warranty covers the cracking or splitting of wood components as well as manufacturing defects other than those that affect the satisfactory operation of the gun. Our warranty obligation is limited to the repair or replacement of any part or parts in the Model 51 product which are returned to the factory or any authorized Warranty Repair Station and which are determined by us to be defective or to affect adversely the satisfactory operation of the gun. We assume no liability for any incidental or consequential damages.

Our warranty is made to the original owner of the Model 51 and is not transferable. The following items are specifically excluded from coverage under this warranty:

- (a) Normal wear of the protective or decorative finishes of the wood or metal components.
- (b) Damage or malfunctions resulting from accident, negligence, misuse, or unauthorized repair or alteration;
- (c) Damage or malfunction resulting from barrel obstructions;

(d) Damage or malfunction resulting from use of other than factory loaded (lead shot) ammunition.

This warranty is valid only upon registration with the manufacturer of the enclosed warranty card, which must be filled out and mailed within 30 days of the original purchase. Notification of registration of this warranty will be made to you in the form of a convenient wallet-sized warranty card on which your name and the serial number of your Model 51 will be recorded.

Guns to be serviced under this warranty must be brought directly or shipped prepaid to an Ithaca authorized Warranty Repair Station or to: Service Department, Ithaca Gun Company, 123 Lake St., Ithaca, New York 14850. All guns shipped to a factory Warranty Repair Station or the Ithaca Gun Company Service Department are subject to a \$5 postage and handling charge. The handling charge will be in the form of a C.O.D. return shipment.

NO WARRANTIES ARE MADE OR ARE AUTHORIZED TO BE MADE OTHER THAN THOSE EXPRESSLY STATED HEREIN. This warranty is expressly in lieu of any other expressed or implied warranty, and of any other obligation of the manufacturer.

### EXTRA BARRELS

Many shooters change barrels according to the game or the season. You can order extra Ithaca barrels from Ithaca Dealers. Or order direct. Send us your name, address, model and serial number of your Ithaca gun, plus your choice of barrel, gauge, length, choke. Include check or money order for exact amount. New York State residents add 7% sales tax. Send order to us at 123 Lake St., Ithaca Gun Co., Ithaca, N.Y. 14850.

\*\*See note page 3 for explanation.

## Model 37 & 51 field grades.

Your Model 37 can be as Featherlight as 5 1/4 lbs. and still include all the exclusive features described on pages 24 & 25. Forty years experience hunting all kinds of game from quail to white tail have proved the reliability of the solid steel and American walnut you find in this bottom-ejecting Ithaca pump.

Model 37 Featherlight shotguns are 5-shot, come with migratory game plug. Left hand safety is available. For information on extra barrels, see page 7.

### Model 51

Your soft-recoil Model 51 gas-operated semi-automatic, is packed with its warranty registration certificate. It registers the gun's serial number in your name. So be sure to read the Model 51 Lifetime Operational Warranty, Limited, same as MAG-10, page 15.

All Model 51's have reversible safety, a Raybar front sight that red-lights your target, handsome impress checkering. Extra barrels are available except magnum, see page 11.

## Ithaca MAG-10™ Supreme & Deluxe

### Ithaca MAG-10™

There simply is not another gun made to compare with the Ithaca MAG-10. It is the world's only gas-operated, semi-automatic 10-gauge magnum. It was designed from scratch by Ithaca to be the most formidable waterfowling gun available. Yet it is also gaining fame as the best for gunning Turkey in those States where a season is allowed. Its action is Ithaca quality through and through. Its gas system features the exclusive Ithaca Countercoil™ that absorbs the punch of 3½" magnum 10-gauge power so it feels about like a 12-gauge magnum.

The essential reliability a waterfowling gun needs has been built into our MAG-10 beginning with its receiver machined from a single block of ordnance grade steel. Critical action parts are stainless steel, and this non-corroding steel is the metal we use in our Countercoil recoil system.

Your MAG-10 has a Lifetime Operational Warranty (Limited). (see below).

Eighteen-line, sharp hand checkering in solid American Walnut is featured on stock and forend of MAG-10 Supreme and Deluxe, a secure grip even for

gloved hands. A costly, semi-fancy grade of American walnut is used for our Supreme MAG-10. It is grade "A" fancy. The grain is elaborate and interesting, having rich pattern depth and color that add so much beauty to the looks of a shotgun.

For our Deluxe MAG-10 the wood grade is semi-fancy American walnut, good looking and functional, enhancing the proud possession of one of these fine shotguns.

Experimenting with the MAG-10, in every possible shooting situation, we have established as perfectly as possible the optimum specifications for pointing ease and speed, plus shooting accuracy. The barrel length has been set at 32", choked Full. Bradley type front sight. Drop at comb is ideal at 1½", and at heel 2¾", with length of pull being 14½". Weight is 11½ lbs. 3-shot capacity.

High quality "floating" vent rib, presentation grade recoil pad and swivels are standard. We include the swivels because you might want to attach a carrying strap to your MAG-10 for those hikes through soggy marshes on your way to the blind.

(Deluxe Vent) Suggested retail price \$549.95\*\*  
(Supreme Vent) Suggested retail price \$649.95\*\*  
Cleaning brush is included.

### Lifetime Operational Warranty Limited

This Ithaca MAG-10 shotgun is warranted to operate satisfactorily for as long as you own it. This warranty covers any and all defects in parts, materials or workmanship which affects the satisfactory operation of this gun. In addition, but for one year from date of purchase only, this warranty covers the cracking or splitting of wood components as well as manufacturing defects other than those that affect the satisfactory operation of the gun. Our warranty obligation is limited to the repair or replacement of any part or parts in the MAG-10 product which are returned to the factory or any authorized Warranty Repair Station and which are determined by us to be defective or to affect adversely the satisfactory operation of the gun. We assume no liability for any incidental or consequential damages.

Our warranty is made to the original owner of the MAG-10 and is not transferable. The following items are specifically excluded from coverage under this warranty.

- (a) Normal wear of the protective or decorative finishes of the wood or metal components.
- (b) Damage or malfunctions resulting from accident, negligence, misuse, or unauthorized repair or alteration;
- (c) Damage or malfunction resulting from barrel obstructions;
- (d) Damage or malfunction resulting from use of other than factory loaded ammunition.

This warranty is valid only upon registration with the manufacturer of the enclosed warranty card, which must be filled out and mailed within 30 days of the original purchase.

Guns to be serviced under this warranty must be brought directly or shipped prepaid to an Ithaca authorized Warranty Repair Station or to: Service Department, Ithaca Gun Company, 123 Lake St., Ithaca, New York 14850. All guns shipped to a factory Warranty Repair Station or the Ithaca Gun Company Service Department are subject to a \$7.50 postage and handling charge. The handling charge will be in the form of a C.O.D. return shipment.

NO WARRANTIES ARE MADE OR ARE AUTHORIZED TO BE MADE OTHER THAN THOSE EXPRESSLY STATED HEREIN. This warranty is expressly in lieu of any other expressed or implied warranty, and of any other obligation of the manufacturer.

\*\*See note page 3 for explanation.

New Ithaca  
MAG-10™ Standard

Ithaca MAG-10™ Standard Grade.  
Power and range combine with balance and smoothness.  
Handles as comfortably as a pump or automatic twelve.

Now there are four grades of the Ithaca MAG-10 gas-operated, semi-automatic shotgun. The MAG-10 Supreme and the Deluxe are described on pages 14 & 15.

New this year are the MAG-10 Standard Plain Barrel and the Standard Vent Barrel. Both of these new models feature the same high-quality action with receiver milled from solid steel, and the same stainless steel Countercoil® gas system.

These Standard Grades have the same "formidable power and range" and the "balance, and remarkable smoothness" of the MAG-10 Deluxe and Supreme Grades. But the beauty is more in line with words like heavy-duty, down-to-earth, rugged, carefree, practical. But also,

these Standard Grade MAG-10's have a lower price to go with the workmanlike looks of the guns. Yet all models have the MAG-10 Lifetime Operational Warranty, Limited.

You won't find any frills on MAG-10 Standard models. They're designed for dedicated hunters who want MAG-10 efficiency and design quality at a price everyone can afford.

Receiver and barrel on these guns have a vapor-blasted and blued finish which has a satin-matte appearance that reduces glare and is resistant to rust. Barrel length is 32", choked Full. Sight is Bradley type.

You'll worry less about whether your stock gets scratched up a little, as usually happens when you hunt a lot, no matter how careful a person is on his way to or from the blinds. As you can see from the illustration below, these Standard

Grade MAG-10's have pretty plain-looking wood. They don't have any fancy finish or expensive checkering to get in the way of refinishing. On the other hand, stock and forend are solid.

Stock and forend are solid American walnut with a special Cameron-formulated oiled finish. This finish repels moisture well and makes refinishing a simple job, if it's ever necessary. Stock dimensions are the same as given for MAG-10 Supreme and Deluxe. Recoil pad is standard equipment.

The forend nut is drilled and tapped to receive swivels. Weight is 11½ lbs. for the MAG-10 Standard Vent. The Standard Plain Barrel is 8 oz. lighter. Chambered for 3½" Magnum shells only, three-shot capacity.

Standard Plain Barrel  
Suggested Retail Price \$429.95\*\*  
Standard Vent Barrel  
Suggested Retail Price \$469.95\*\*

MAG-10 Standard Plain Barrel

Lifetime Operational Warranty Limited

This Ithaca Mag-10 shotgun is warranted to operate satisfactorily for as long as you own it. This warranty covers any and all defects in parts, materials or workmanship which affects the satisfactory operation of this gun. In addition, but for one year from date of purchase only, this warranty covers the cracking or splitting of wood components as well as manufacturing defects other than those that affect the satisfactory operation of the gun. Our warranty obligation is limited to the repair or replacement of any part or parts in the Mag-10 product which are returned to the factory or any authorized Warranty Repair Station and which are determined by us to be defective or to affect adversely the satisfactory operation of the gun. We assure no liability for any incidental or consequential damages.

Our warranty is made to the original owner of the Mag-10 and is not transferable. The following items are specifically excluded from coverage under this warranty.

- (a) Normal wear of the protective or decorative finishes of the wood or metal components.
- (b) Damage or malfunctions resulting from accident, negligence, misuse, or unauthorized repair or alteration;
- (c) Damage or malfunction resulting from barrel obstructions;
- (d) Damage or malfunction resulting from use of other than factory loaded (lead shot) ammunition.

This warranty is valid only upon registration with the manufacturer of the enclosed warranty card, which must be filled out and mailed within 30 days of the original purchase. Notification of registration of this warranty will be made to you in the form of a convenient wallet-sized warranty card on which your name and serial number of your Mag-10 will be recorded.

Guns to be serviced under this warranty must be brought directly or shipped prepaid to an Ithaca authorized Warranty Repair Station or to: Service Department, Ithaca Gun Company, 123 Lake St., Ithaca, New York 14850. All guns shipped to a factory Warranty Repair Station or the Ithaca Gun Company Service Department are subject to a \$5 postage and handling charge. The handling charge will be in the form of a C.O.D. return shipment.

NO WARRANTIES ARE MADE OR ARE AUTHORIZED TO BE MADE OTHER THAN THOSE EXPRESSLY STATED HEREIN. This warranty is expressly in lieu of any other expressed or implied warranty, and of any other obligation of the manufacturer.

Ithaca  
5E, & \$5,000.  
Grades

## Ithaca 5E & \$5000 Grade.

In all the nearly hundred years Ithaca has been making shotguns we have only produced a few thousand of these Ithaca Single Barrel Trap Guns. Though each may look the same, seemingly feel the same and shoot the same, each one is different. Even though the same men may work several of these guns each year, no two of their file strokes are the same, no two of their engravings are exactly alike.

But perfection is not measured by sameness. It is a result of a craftsman's exercise of judgment over individual pieces of steel and individual pieces of wood, and how they should be fit one to another.

Famous people have obtained these shotguns. But famous people have nothing to do with the fame these shotguns have achieved. Everyday people with hearts and minds to sense the skills and to achieve the patience to make a shotgun great—and feed their hands the strength and sensitivity to do it—these are the people who have created the fame which Ithaca 5E and \$5000 Grade Single Barrel Trap Guns live up to without fail.

Have you heard of Annie Oakley? She owned one of these guns and shot her way to a position in history with it. John Phillip Sousa had one of these guns named in his honor. Dwight Eisenhower owned one too.

Should you care to add your name to the waiting list for one of these hand-crafted guns, please do. But also please equip yourself with patience. The list is long, and the supply is one . . . at a time.

### ITHACA 5E

The choice of American walnut used in stock and forearm is grade A fancy. Hand engraving and checkering are elaborate. A gold woodcock inlays right side of frame, a pheasant on the left, with woodland scene on trigger plate and guard. Eagle design also tooled into trigger plate. 12-gauge. Suggested retail price \$4,000.00\*\*

### ITHACA \$5000 GRADE

Special, highly figured American walnut, grade AA fancy with the finest of select grain, is used for this superlative shotgun. Hand cut, spearpoint checkering is 28 lines to the inch. Frame, top lever, trigger guard and plate are hand tooled in relief. Green gold and yellow gold inlay frame sides, bottom, and trigger guard. Triple

gold-plated trigger is hand checkered for positive finger grip. Nameplate shield of 18K gold inlays stock. Stock dimensions may be personalized. 12-gauge. Suggested retail price \$5,000.00\*\*

### SPECIFICATIONS

Both grades have  $2\frac{3}{4}$ " chamber, 32" or 34" barrel. Choke: Full. Length of pull:  $14\frac{3}{8}$ ". Drop at comb and heel: Both  $1\frac{3}{8}$ ". Weight 8½ lbs.

\*\*See note page 3 for explanation.

## Ithaca BSA air rifles-extraordinary accuracy

Ithaca offers these fine BSA air guns so that shooters might extend their pleasure of shooting beyond the hunting season or the distant target range, yet retain the feel of the sport. You can shoot quietly and economically in places closed to firearms. To do this, we feel, serious shooters need more than those air guns generally available. BSA air guns give you shooting satisfaction at a price quite reasonable for the quality obtained.

One cocking action and you have full rated power using .22-caliber or .177-caliber ammunition. What's more, unique power seals in the action, together with high-pressure piston and buffers, give you constant muzzle velocity every time you cock these guns. With power the same, you can achieve accuracy you can rely upon and get more consistent hits.

Air gun target shooting is a popular adult sport in Europe. That's why these Ithaca-BSA models have the heft of a firearm, plus a number of firearm characteristics. Barrels are cold-form rifled.

These guns come with a Lifetime Operational Warranty, (Limited):\*

### BSA SCORPION PISTOL

.177 or .22 calibers. Muzzle velocity: 510 fps. with .177 cal. Maximum range: 350 yards. Extremely accurate. Features the same power control as BSA air rifles to help you build a habit

Accuracy the competing marksman needs. Power enough for plinking or varmint shooting. Single shot. Precision rifled barrel of ordnance grade steel. One-piece, molded-nylon stock. Removable rear sight, hooded front sight protector.

Features a long, 15 $\frac{3}{4}$ " sight base, grooved for scope mounting. Barrel extender cocking aid comes with each Scorpion. Extender need not be removed for firing. Trigger is externally adjustable for pull and has automatic thumb safety. Packed with pellets, targets, target holder, lubricating oil and gun's specific inspection certificate. 3 $\frac{1}{2}$  lbs. Suggested retail price \$94.95.\*\*

### ITHACA-BSA AIRSPORTER

About as close to a powder rifle as one can get.

This Airsporter has a feel of power, with generous stock dimensions and rifle-like heft.

Its repeatable accuracy is a result of its cocking mechanism. There is no barrel break with this gun. Barrel and cylinder remain permanently in line. Cocking is by the under-lever principle. Loading plug assures correct alignment and positive air seal. Trigger is adjustable.

This is the gun for serious air rifle target shooters. .177 or .22 calibers. Suggested retail price: \$159.95.\*\*

### BSA BUCCANEER

This Ithaca Buccaneer may look like a science fiction rocket gun or a faser that shoots light rays but don't let that space age look fool you.

The Buccaneer is a real air-rifle, available in .177 or .22 caliber. And that space age appeal makes it the ideal target or plinking rifle for a beginning shooter. The only guns that look like it are professional match rifles used in international competition. They have the same type thumbhole stock and full pistol grip that's comfortable in all-position shooting.

Even with Buccaneer's durable high impact polyurethane stock it still weighs only 6 lbs.

This air rifle has an exceptional trigger. It's adjustable and has the same type crisp let off that expensive big game rifles have.

Aperture rearsight has click adjustment for windage and elevation. Both rear and front sight are adjustable for height to allow for personal shooter preference. Front sight is hooded, with an element that can be inverted to provide either a blade or a bead front sighting point.

Other features include: single-action cocking. Muzzle velocity of 510 fps with .177 cal. pellets; 400 fps with .22 cal. Comes packed with cocking lever, lubricant, pellets, targets, heavy steel target holder. Suggested retail price \$99.95.\*\*

### ITHACA-BSA METEOR

.177 or .22 calibers. Barrel breakdown loading. Patented stop reseats barrel precisely after loading, helps maintain accuracy. Open front sight. Suggested retail price \$69.95.\*\*

Ithaca BSA Air Rifles and Pistols are not available in Canada.

\*Warranty same as for Ithaca MAG-10. See page 15.

\*\*See note page 3 for explanation.

BSA Airsporter

BSA Meteor

## Ithaca-LSA Rifles have devastating accuracy and easy feel.

Deluxe models feature walnut stock with forend tip and pistol grip cap of rosewood highlighted by white spacers. Ample skip-line hand checkering, rosewood stock tip and pistol grip cap with white spacers, butt pad, deluxe high-lustre bluing, scope rings. No iron sights.

Trigger is adjustable without removing the action.

These rifles have a floating barrel. Single point barrel-to-stock mount keeps vibrations under control so they don't change with each shot. You shoot tighter groups.

Barrels are Bofors ordnance steel, cold-forged rifled and hand lapped. Bolt is chrome-moly steel with double lugs riding double side rails. Cartridge feed is straightline from magazine clip to chamber.

The clip permits fast loading and unloading. You can carry it in a pocket. With additional clips on hand, you're ready with different loads as you need them.

Stocks are walnut, hand lacquered to a deep lustre finish, hand rubbed between coats. All models are grooved, drilled and tapped to receive telescopic sights.

### LSA-55 STANDARD

With adjustable iron sights, Monte Carlo stock, detachable swivels.

### MODEL LSA-55 DELUXE

Same as LSA-55 but with rollover cheek piece, skip-line hand checkering, rosewood stock tip and pistol grip cap with white spacers, butt pad, deluxe high-lustre bluing, scope rings. No iron sights.

### MODEL LSA-65

Same as LSA-55 Standard, except larger calibers.

### MODEL LSA-65 DELUXE

Same as LSA-55 Deluxe, except larger calibers.

### MODEL LSA-55 HEAVY BARREL

LSA-55 with special stock, rollover cheek piece, non-glare oil finish, butt pad. Has bull barrel for pinpoint long-range accuracy.

### ITHACA MODEL LSA-55 TURKEY GUN

The Ithaca-LSA Turkey Gun is a 12-gauge shotgun barrel mounted over a .222 Rem. caliber rifle barrel with muzzle brake. It's a super gun for hunting where both long and close shots are expected. The gun has a monoblock design, switch-type barrel selector, exposed rebounding hammer. Stock is Monte Carlo, both it and forend have skipline hand checkering and oil finish. Butt pad, folding rear sight, dovetail front sight, solid matted rib and sling swivels are standard. Grooved and tapped to receive scope.

## The athlete of shotguns.

In 1977, approximately one out of three trophies at the United States' largest trap-shooting competition THE GRAND AMERICAN went to shooters using Ithaca-Perazzi® shotguns.

In 1976, an Ithaca-Perazzi won the Grand American Handicap. The year before that ten world's trap-shooting records were broken with an Ithaca-Perazzi. Every year it's the same in local or national shoots, international competitions, or the Olympics, the men and women shooting Perazzi shotguns take home the trophies.

Standing in a gun rack alongside its competitors a Perazzi does not reveal its refinement, the high-strung break-away flightiness of a thoroughbred. But on the line, in the hand, at the shoulder, on the point—this gun, with your eye, your trigger finger and your coordination, are all one and together powdering clay targets. A great number of pairs of skilled hands create a Perazzi. They've measured the fit and feel, and the balance, handworked the unnecessary wood and metal away, married the remainder of what they've fashioned superbly, proved it in test firings, and patterning to the final refinement before they've said it's ready. You don't try a Perazzi. It is all tried and ready to help you better whatever your skill, whoever you are.

No two Perazzi shotguns are exactly the same. Men with sensitive feel for the way metal should move in an action, responding to the

tension of a spring or the pressure of a mating part, this is what makes a Perazzi.

It's these men, filing, tapping, carefully bending and adjusting until what they are looking for they finally find.

Perazzi chokes are hand-honed until desired percentages are obtained. Final test pattern is delivered with the gun that fired it.

Perazzi vent ribs are brazed to the barrel, sight aligned and then filed by hand. Wood-to-metal fit is all handwork. There simply is no such thing as an off-balance Ithaca-Perazzi.

All Perazzi shotguns have chrome-lined chambers to protect against corrosion. Stocks are interchangeable. Presentation recoil pad is standard.

### NEW PERAZZI MT-6 COMBINATION TRAP

The MT-6 is now available as a combination set. Seven choked tubes are interchangeable barrel-to-barrel, let you shoot perfect powdering patterns from any line in any event.

When you look at this gun in its single barrel version, you don't see what you'd expect—the barrel is lower than normal, in the same position as the Under barrel of the Over/Under version. This single barrel sends recoil straight back through the stock and frame to reduce recoil sensation.

To maintain an ideal sighting plane, a machined aluminum vent rib rises  $1\frac{1}{8}$ " from the single barrel, which gives this Perazzi an unmistakable look of the future. The rib is  $\frac{3}{8}$ " wide, anodized flat black and the top is crescent-patterned to reduce glare.

Single selective triggers. Bradely-type sights. Choke tube wrench. Stock wrench for interchangeable stocks. Padded Perazzi hardcase.

### NEW COMPETITION IV SINGLE BARREL TRAP

The ultimate 16-yard and handicap trapgun.

Four interchangeable choked tubes are standard.

Wide crescent-patterned vent rib, Bradley-type sights, wide target-style trigger, 24 line hand-cut checkering on select walnut stock and forend. Choked tube wrench, stock wrench for interchangeable stocks. Padded hardcase.

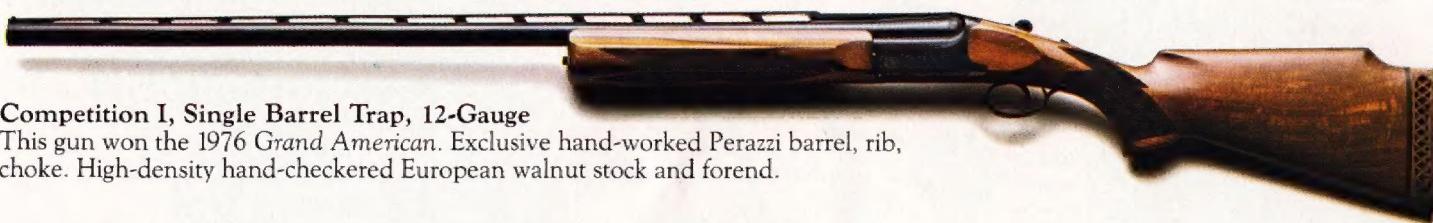

MT-6 O/U

Extra steel at the muzzle accommodates machine threading, so when you screw in the choked tubes there's constant barrel thickness and no collar to deflect shot.

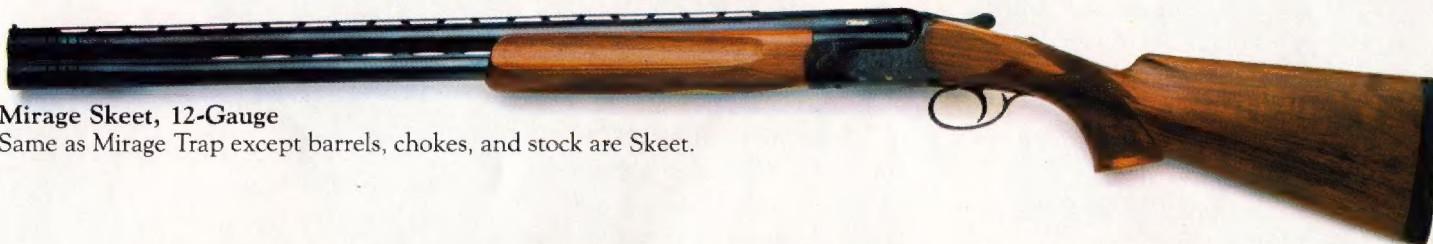

Competition IV  
SBT

## Ithaca-Perazzi™ Target Grades

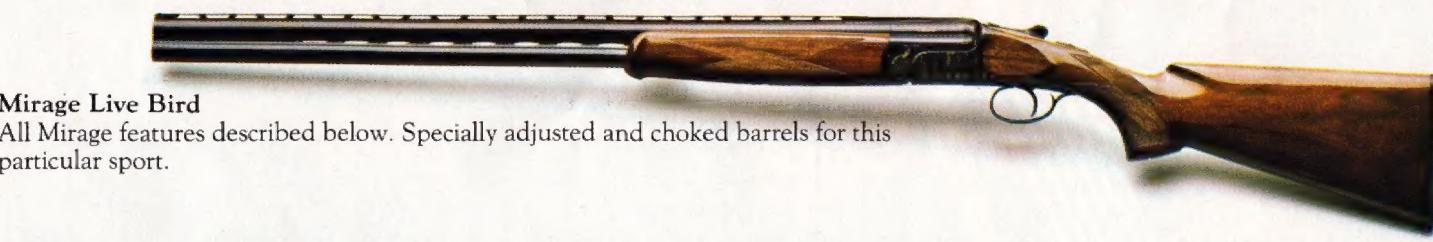

**Competition I, Single Barrel Trap, 12-Gauge**

This gun won the 1976 Grand American. Exclusive hand-worked Perazzi barrel, rib, choke. High-density hand-checkered European walnut stock and forend.

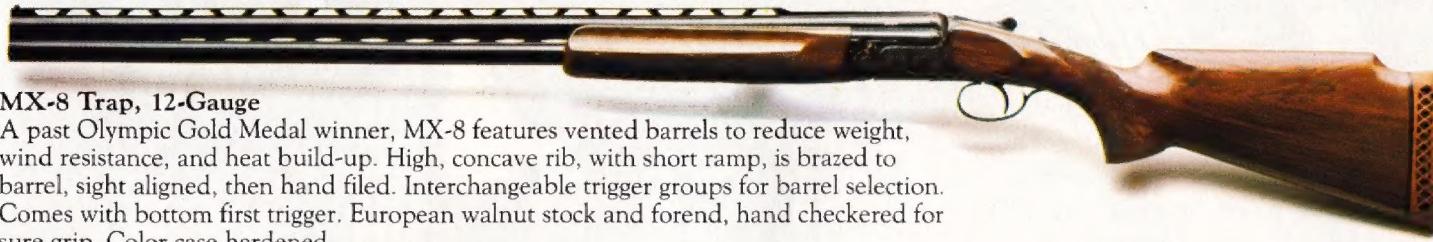

**Mirage Skeet, 12-Gauge**

Same as Mirage Trap except barrels, chokes, and stock are Skeet.

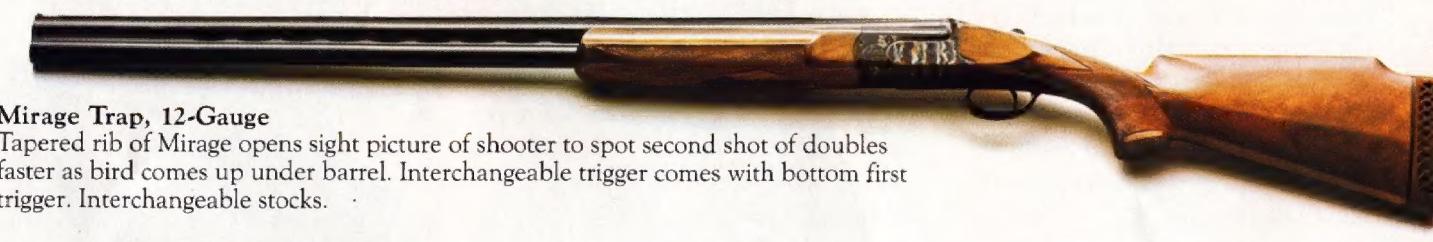

**Mirage Live Bird**

All Mirage features described below. Specially adjusted and choked barrels for this particular sport.

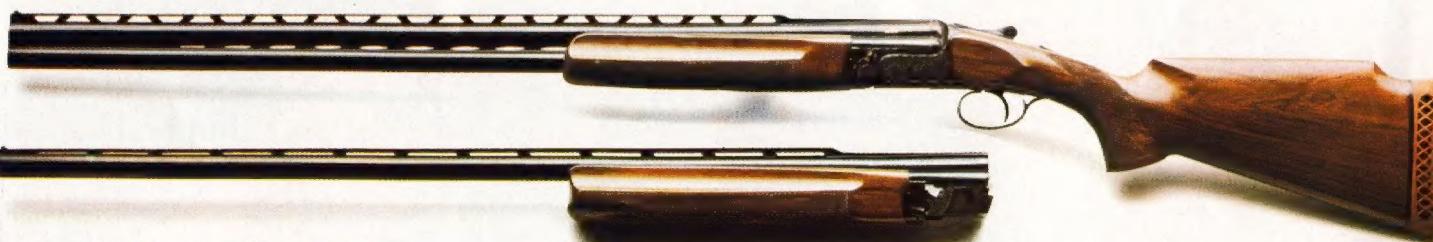

**MX-8 Trap, 12-Gauge**

A past Olympic Gold Medal winner, MX-8 features vented barrels to reduce weight, wind resistance, and heat build-up. High, concave rib, with short ramp, is brazed to barrel, sight aligned, then hand filed. Interchangeable trigger groups for barrel selection. Comes with bottom first trigger. European walnut stock and forend, hand checkered for sure grip. Color case hardened.

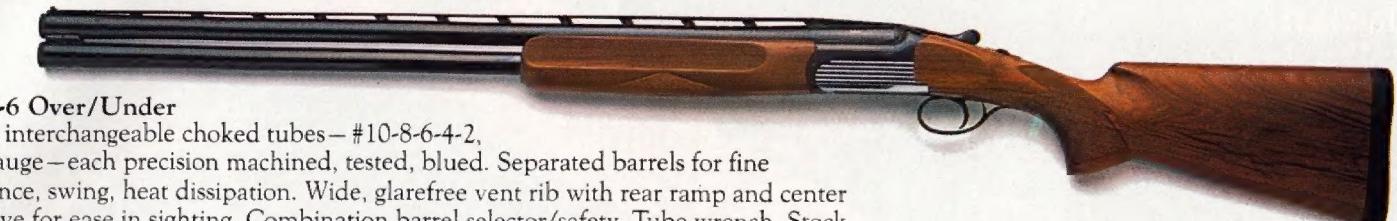

**Mirage Trap, 12-Gauge**

Tapered rib of Mirage opens sight picture of shooter to spot second shot of doubles faster as bird comes up under barrel. Interchangeable trigger comes with bottom first trigger. Interchangeable stocks.

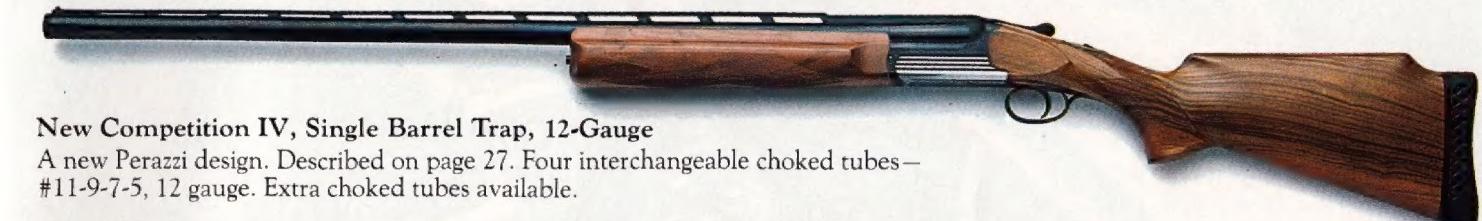

**MX-8 Combination Trap, 12-Gauge**

Set ten world's trap-shooting records in 1975. Same construction as MX-8. In addition to the Over/Under doubles barrels, you also get a hand-fitted single barrel for singles or handicap events. Two trigger groups included, one fires Under barrel first, the other fires the single barrel.

**MT-6 Over/Under**

Five interchangeable choked tubes — #10-8-6-4-2, 12 gauge — each precision machined, tested, blued. Separated barrels for fine balance, swing, heat dissipation. Wide, glarefree vent rib with rear ramp and center groove for ease in sighting. Combination barrel selector/safety. Tube wrench. Stock wrench. Hardcase. Also available in skeet version. Skeet stock, recoil pad; 28" barrels; two "skeet" choked tubes plus Modified, Improved Modified, Full tubes.

**New Competition IV, Single Barrel Trap, 12-Gauge**

A new Perazzi design. Described on page 27. Four interchangeable choked tubes — #11-9-7-5, 12 gauge. Extra choked tubes available.

**New MT-6 Combination Trap, 12 Gauge**

Seven interchangeable choked tubes #2-4-6-7-8-10 & 11. Each hand-honed for a perfect barrel fit and a perfect pattern. Over/Under barrels for doubles, separate Under barrel for singles and handicap events. Exciting new high-rise vent rib on individual Under barrel.

## The Ithaca Hawken percussion rifle.

**THE HAWKEN STORY.** In the early 1800's St. Louis was the major supply town for the Mountain Men, a ferocious breed who trapped and hunted the Rockies all but a few weeks each year. The city had many gunsmiths, but young Jacob Hawken understood better than the rest what these trappers and traders needed in a gun and Jacob gave them what they needed.

His flintlocks and percussion rifles were easier to carry, stood more abuse, and were more powerful than the then widely-used Kentucky long rifle.

The Hawken quickly became favored by most Mountain Men—colorful characters like Kit Carson, Mariano Modena, Old Bill Williams, Liver-Eatin' Johnson, and Jim Bridger. Orders flowed in faster than Hawken could fill them, and in 1822 he sent for his brother Samuel to join him.

Like the hunters and trappers who owned them, no two rifles the Hawken brothers made were alike but certain features told a Mountain Man he had a Hawken in his hands —walnut half-stock, open sights, double set triggers, browned iron hardware and octagonal barrel.

As the legend of the Mountain Man grew so did the fame of the rifle he carried. Today there are no Kit Carsons, no Jim Bridgers, no wilderness men—few of their original Hawkens exist, and even fewer owners willing to sell them at any price.

In 1976, we formed our Black Powder Division and introduced the Ithaca Hawken as the first step in providing black powder enthusiasts products of high quality and authenticity at a fair price.

Ithaca Hawken kits are available in .50 caliber with walnut stock.

Suggested kit retail price: \$285.00.

### THE HAND MADE ITHACA HAWKEN

Each year we will assemble and finish by hand a few ready-to-shoot Ithaca Hawkens built to original Hawken workprints.

Its handwork and features would have you believe it is a custom Hawken. Browned Hawken-

style iron furniture and octagonal 32" barrel. Two barrel keys. Buckhorn-style rear sight. Double set triggers.

Parts are all U.S. made. Hooked breech. 1 $\frac{7}{8}$ " throw percussion lock. Attached twin thimbles and under-rib. Twin wire-type underlugs. German silver barrel key inlays. Hawken-style toe and butt plates, lock bolt inlays, barrel wedges, entry thimble, trigger guard, ramrod and cleaning jag, nipple and nipple wrench.

Gunsmiths fit the one inch diameter barrel, rifle it one twist in 66 inches. They hand-sand the Black Walnut half-stock then rub on a special oil finish.

Weight is approximately 9 lbs. We will make only a few each year, and the handwork in each will make it one-of-a-kind. A "How to Load and Fire Your Rifle" manual by John Baird, editor of THE BUCKSKIN REPORT, comes with your Hawken.
